DISTRICT OF COLUMBIA BICYCLE MAP

District Department of Transportation

A bicycle is faster for most urban trips than either driving or transit.

Bicycle exercise can help reduce heart disease, diabetes, and other chronic illnesses among District residents.

Cycling 8 miles rather than driving prevents 15 lbs. of air pollutants. Bike travel reduces automotive travel by 1% nationally and saves an estimated 700 million gallons of fuel annually.

A motor vehicle is the second highest household expense. Bicycling provides a cost efficient means of travel for residents and visitors.
