DDOT’s Guidance for Comprehensive Transportation Review (CTR) – A Multi-Modal, Parking, and TDM-Focused Alternative to the Traditional Traffic Impact Study

APBP Webinar – June 16, 2021

Aaron T. Zimmerman, PTP
DDOT Site Development Program Manager
DDOT Neighborhood Planning Branch

- Site Development and Zoning Review
- Public Space – Curb Cuts, Public Art, Streetscapes, Streateries, Café Patios, Tactical Urbanism
- Neighborhood Livability Studies
Highlights of DDOT’s New CTR Guidelines

1. Focus on Vision Zero, public realm design, site design
2. Off-street parking evaluation and mitigation for induced demand from high parking ratio
3. Pedestrian gap analysis and repurpose LOS analysis to leverage non-auto improvements
4. CTR waiver for infill sites with low parking ratios and transit proximate (~300,000 SF or less)
5. Transportation Mitigation Fund
6. Standardized TDM plans for mitigation based on traffic impacts and parking supply

Version 1.0 Guidelines can be found at: https://wiki.ddot.dc.gov/display/public/COMP/Comprehensive+Transportation+Review

Version 2.0 to be released in Summer/Fall 2021
1. Design – DDOT Site Review Priorities

**Old Model**
- Traffic study first... all decisions flow out of the traffic study... solutions almost always auto-oriented and capacity increasing

**New Model**
- Design first... the most important mitigation begins w/the bldg itself. Safe & high-quality public realm most important feature of project
- Traffic impacts last... b/c if you plan and design for auto-oriented development, you'll get high traffic generating development

Source: Forthcoming 2021 Updated CTR Guidelines
1. Design – Vision Zero Improvements Checklist

Geometric and Site Design
- Minimize # of curb cuts
- Curb extensions
- Reduce curb radii
- Remove slip lanes & channelized turn lanes
- Better align skewed intersections
- Head-in/head-out loading
- Add tree boxes and street trees
- Convert bike lanes to protected bikeways
- Road diets, narrower lanes, lower design speed
- Upgrade sidewalks and curb ramps to modern ADA
- Upgrade to high-visibility crosswalks
- T intersections – ramps & crosswalks all legs
- 300-500 foot block lengths
- Activated streetscape
- Reduced on-site parking
- Lighting for private streets/alleys

Traffic Signal Changes
- Install HAWK signals
- Remove dual left-turns
- Remove right-turn overlaps
- Leading Pedestrian Intervals
- Signal timing progression priority for cyclists in select bike corridors
- Add no RTOR signs at intersections
1. Design – Closing Channelized Right-Turn Lanes

9th Street and Maine Avenue SW – Before and After Wharf Phase 1 (2017)
1. Design – Curb Extensions

Source: NACTO
1. Design – Closing Curb Cuts

- Poor Streetscape – Kills Street Life
- Conflict points with sidewalks
- 9 Curb Cuts to be closed on both properties
- 2 Curb Cuts total to serve both properties
1. Design – Protected Intersection

New Jersey Avenue and I “Eye” Street SE

Source: Gorove Glade Associates – CSX East Redevelopment
2. Parking – Why Focus on Minimizing Parking?

• More density
• Housing affordability
• Fewer vehicle trips
• Reduce auto dependency
• Transit supportive
• Site design flexibility
• Mitigation and TIAs are costly
• Vision Zero
• Climate change

Source: Forthcoming 2021 Update to CTR Guidelines

Developments should provide no more than this amount of off-street parking.

Mitigation required above these to account for induced demand for driving.
3. Multi-Modal – Pedestrian Network Gap Analysis

Evaluate completeness and accessibility of pedestrian connections to:
- Transit
- Parks
- Schools
- Grocery Stores
- Stadiums
- Activity Centers
- Other Amenities

Source: Gorove Slade Associates – 5 M Street SW Project
4. CTR/TIA Waiver for Low Impact Development

CTR Required: 100 total peak hour person trips

TIA Required: 25 peak hour inbound or outbound vehicle trips

CTR and/or TIA may be waived if all criteria met:
- Close to transit (<0.50 mile of rail, <0.25 priority bus)
- Low parking ratio
- Total parking supply of 100 or fewer spaces (~300,000 SF or less)
- Implement a TDM Plan
- Ensure complete ped network (install anything missing)
- Curb cuts and loading acceptable
- Meet bike parking and shower/locker requirements
- 2 EV charging stations
5. Mitigation Fund – Cash-In Lieu for Bike/Ped/Transit

Riverpoint (ZC 17-05) Mixed Use Development

- Right-turn lane no longer needed b/c it conflicts with a new cycletrack
- Worked with Zoning Administrator and developer to convert old proffer to cash
- Used cash contribution to fund planters for P Street cycletrack buffer

2nd Street and P Street SW
6. Mitigation – Standardized TDM Plans and Mitigations

6. Mitigation – Multi-Modal Package

5 M Street SW Project
- 608 Res. Units, 24k SF Retail
- 311 Parking spaces, 1 Block from Metrorail

Mitigation Tests
- Parking Test – Over-parked by 104 spaces
- LOS Test – 4 failing intersections

Negotiated Mitigation
- Enhanced Tier TDM Plan
- Install two (2) CaBi expansion plates
- Contribute $90,000 toward Mitigation Fund
- Construct 3 curb extensions
- CaBi memberships to each new resident (1 yr)
- Shift bus stop & new bus pad
- No roadway capacity increases
Aaron T. Zimmerman, PTP
Site Development Program Manager

CTR Guidelines, Scoping Form, White Paper:
https://wiki.ddot.dc.gov/display/public/COMP/Comprehensive+Transportation+Review
Extra Slides
Mitigation – Example 2

Lady Bird Project
- 219 Res. Units, 18k SF Grocery & Retail
- 319 Parking spaces, 1 Mile from Metrorail

Mitigation Tests
- Parking Test – Over-parked by 152 spaces
- LOS Test – passed, no failing intersections

Required Mitigation
- Enhanced Tier TDM Plan
- Construct 4 curb extensions
- Curbless street alley design
- Install HAWK pedestrian signal (com benefit)
- $100,000 for connection to Metro (com benefit)
Standardized TDM Plans by Land Use and Impact

Residential TDM Plans

Baseline Plan (Residential)

- All PUDs, LTRs, Design Reviews, and other projects where TDM is required by DDOT will start with a Baseline Plan. This Plan is intended for developments that are up to 15% over-parked per Table 2 and no intersection impacts were identified in the TIA.

Include all of the following:
- Upload the cost of vehicle parking from the lease or purchase agreement for each residential unit and charge a minimum rate based on the average market rate within a quarter mile.
- Identify Transportation Coordination for the planning, construction, and operations phases of development. The Transportation Coordinators will act as points of contact with DDOT, goDgo, and Zoning Enforcement and will develop, distribute, and market various transportation alternatives and options to the residents.
- Will provide Transportation Coordinators’ contact information to goDgo, conduct an annual commuter survey of employees, and report TDM activities and data collection efforts to goDgo once per year.
- Transportation Coordinators will receive TDM training from goDgo to learn about the TDM conditions for this project and available options for implementing the TDM Plan.
- Provide welcome packets to all new residents that should, at a minimum, include the Metrocard pocket guide, brochures of local bus lines (Local and Metrobus), and carpools and carpool information. DDOT’s goDgo program will be highlighted.
- Provide residents who wish to carpool with detailed carpooling information and will be referred to other carpooling services sponsored by the Metropolitan Washington Council of Governments (MWCOG) or other comparable services. MWCOG does not offer this in the future.
- Transportation Coordinator will subscribe to goDgo’s residential newsletter.
- Post all TDM commitments on websites, public availability, and allow the public to see what commitments have been made.
- Will meet DDOT’s short- and long-term parking requirements. Long-term bicycle space will be provided free of charge to residents.
- Long-term bicycle storage rooms will accommodate non-traditional sized bikes including cargo, tandems, and kid bikes.

Enhanced Plan (Residential)

- Intended for developments that are up to 20% over-parked (per Table 2) OR minor intersection impacts were identified in the TIA.

Include everything in Baseline Plan plus all of the following:
- Install Transportation Information Center (Display electronic screen) within the lobby containing information related to local transportation alternatives. At a minimum the display should include:
  - Guidance for Comprehensive Transportation Review
  - June 2019

Information about nearby Metrobus stations and schedules, Metrobus stops and schedules, car-sharing locations, and nearby Capital Bikeshare locations indicating the availability of bicycles.
- Will not lease unused residential parking spaces to anyone outside of tenants of the building (e.g., will not lease to other nearby office employees, single-family home residents, or sporting events), unless there is an agreement in place in which no parking is provided at the other property.
- Designate [insert number] parking spaces in the vehicle parking garage for car-sharing services to use with right of first refusal. If an agreement has not been reached with a car-sharing service to occupy all of the dedicated spaces, the Applicant will provide one (1) [insert number] year of membership to Capital Bikeshare for each resident after the building has opened.
- Additional short- and long-term bicycle parking spaces above DDOT requirements: [specify amount]
- Provide a bicycle repair station in each long-term bicycle parking storage room.
- Provide one (1) collapsible shopping cart (utility cart) for every 50 residents, for a total of [insert number] to encourage residents to walk to the grocery shopping and run errands.
- Promote transportation events, e.g., by [located address], National Walking Day, or Free Day on property website and in any internal building newsletters or communications.

Menu of additional strategies (Baseline)

- Intended for developments that are over-parked by more than 20% (per Table 2) OR impacts identified at multiple intersections OR severe intersection impacts were identified in the TIA.

Include everything in Baseline and Enhanced plans plus choose from the following (non-exhaustive) menu based on severity of impacts and parking rate:
- To encourage bike-sharing, a business center will be provided on-site and available for free to residents 24 hours per day. Access to a copier and internet services will be included.
- Provide an annual membership to Bikeshare to each resident for [insert number] year(s) after the building opens.
- Provide SmarTrip cards pre-loaded with [insert amount] for all new residents or employees for [insert number] year(s) after the building opens.
- Fund and install a 9-dock Capital Bikeshare (Cbb) station with 12 bikes and fund one-year maintenance and operations costs.
- Fund and install the expansion of the Capital Bikeshare (Cbb) station located at [insert location] by [insert number] docks.
- Will hold a transportation event for residents, employees, and members of the community once per year for a total of [insert number] years. Examples include resident social, walking tour of local transportation options, goDgo lobby event, transportation fair, WMATA Everyday Cycling seminar, bicycle safety/information class, bicycle repair event, etc.

- Standardized TDM Plans for Residential, Office, Retail, Hotel/Tourism in Appendix C
- Strategies tailored to users: residents, employees, visitors, customers
- Three Tiers of TDM Plans based on parking and traffic impacts:
  - Baseline
  - Enhanced
  - Enhanced Plus
## Account for Parking in Trip Generation Calcs

### Low Parking Ratio Site
- 175 Residential Units
- 20 Parking Spaces
- 65% auto mode share

**ITE Methodology (vehs)**
- AM: 11 enter, 30 exit
- PM: 31 enter, 19 exit

**DDOT Adjusted (vehs)**
- AM: 11 enter, 30 exit
- PM: 31 enter, 19 exit

### High Parking Ratio Site
- 175 Residential Units
- 100 Parking Spaces
- 65% 85% auto mode share

**ITE Methodology (vehs)**
- AM: 11 enter, 30 exit
- PM: 31 enter, 19 exit

**DDOT Adjusted (vehs)**
- AM: 11 enter, 30 exit
- PM: 31 enter, 19 exit

Note: Use professional judgment and knowledge of local conditions and commuting patterns to also account for the potential of ride-hailing trips
Head-In / Head-Out Truck Maneuvers

Source: Gorove Slade Associates – 5 M Street SW Project
Why Focus on Minimizing Parking?

- DC projected population increase of 187,000 by 2035. Roadway system is built out and congested, everybody can’t bring a car, growth must rely on non-auto options.
- **More density** – less parking allows for more density while generating minimal additional new personal vehicle trips, especially in Metro-accessible areas.
- **Reduce vehicle trips** – TDM, minimal parking, priced parking, and proximity to high quality transit all work together to reduce vehicle trips.
- **Reduce auto dependency** – parking is permanent site feature and driver of vehicle trips, availability of parking induces more driving and reinforces auto dependency.
- **Transit supportive** – little or no parking brings “transit-ready” residents/workforce.
- **Site design flexibility** – buildings can be moved around into more optimal locations, and site can provide more green space, trees, and bike racks.
- **Housing affordability** – not building parking saves $$ that can be passed on to future residents/tenants.
- **Mitigation and TIAs are also costly** – more $$ can be saved by not conducting TIAs or implementing physical mitigation if meeting DDOT parking & TDM requirements.
- **Vision Zero** – no on-site parking means no need for a driveway or curb cut, thus minimizing conflicts w/pedestrians.
- **Climate change** – less parking and driving means less exhaust and CO2 per capita.

Source: MAPC Perfect Fit Parking
DDOT Lessons Learned

• Turned review from exercise in traffic impact analysis to site-based design review
  – Reduced number of required TIA/CTRs by about 1/3, but an increase in “defensive” TIAs for community and ANC
  – Scope of studies are better tailored to needs of project – no need to study 20 intersections for every project
  – Saving significant amount of staff time on scoping and reviewing – across multiple divisions
  – Quicker reviews allows staff to work on other agency priorities
  – Greater frequency of DDOT reports submitted on time

• Site design, parking supply, TDM, and mitigation negotiation all resolved earlier process
  – Prevents a lot of back-and-forth w/developer in week leading up to zoning hearing
  – More discussions on ped realm and Vision Zero have resulted in more curb extensions + removal of slip lanes
  – Project design and mitigation negotiations sometimes wrapped up as early as the pre-application meeting

• Positive feedback from developers
  – Better consistency in mitigation “asks” from DDOT
  – DDOT max parking ratios give developer cover with lenders and community who want more off-street parking

• Change in skill sets in employees hired in Development Review group
  – Less Synchro, more urban design
DDOT Recommendations for Other Jurisdictions

- DDOT’s new model of development review is applicable to other jurisdictions, either entirely or individual components, especially if there is access to high-quality transit.
- Planning for auto-oriented development will yield higher traffic generating projects.
- Invest in high quality transit – it’s the linchpin to allowing higher densities, reducing auto-dependency, and giving more policy options in the review of new development.
- A focus on reduced parking, Vision Zero, and pedestrian realm design are most important for the 21st Century City and are a better use of staff time than on scoping/writing/reviewing TIA.
- Streamlining the CTR/TIA process can save a tremendous amount of agency staff time (e.g., study waiver, standardized TDM plans, clear public realm design criteria).
- Consider other agency and city public policy goals, aside from traffic congestion relief, when developing site review priorities (e.g., housing, equity, ped safety).
- Take a firm stance against roadway capacity increases or widenings since they induce demand for driving and encourage auto-dependency; negotiate non-auto network improvements or cash in-lieu.
- Consider having the development review function sit within a planning or public realm design/activation group, rather than with traffic engineers or signal engineers.
Evolution of CTRs/TIAs in the District

Pre-2012: Traditional Traffic Impact Study (TIS)
- Propose a development, do a traffic study, directly mitigate roadway LOS impacts
- Introduced concept of TDM and non-auto in lieu of roadway mitigation

- Early national leader in using multi-modal person-trips methodology (ultimately adopted by ITE in Trip Gen Handbook)
- Changed from TIS to Comprehensive Transportation Review (CTR)
  - De-emphasized TIA/TIS as “be all, end all” of site review
- New perspective – traffic analysis does not drive all decision making (more often ped safety & public space design)
  - Less focus on accommodating driving in by suburban commuters, more focus on livability and quality of life for District residents
- Introduced concept that parking is a driver of vehicle trips – parking is not just a static zoning requirement
  - Adjust veh trip gen based on reduced or over-supply of parking
  - Right-size residential parking based on ParkRightDC data

2019 & 2021: CTR w/greater focus on Site Design, Parking, TDM (“2019 v1.0” and “2021 v2.0”)
- Introduces off-street maximum vehicle parking benchmarks by land use and proximity to transit
  - Benchmarks tied to parking demand research and MoveDC & Comp Plan modeshare goals of 75% non-auto H-W trips
  - Goes beyond right-sizing parking based on present demand and attempts to drive modeshift by cutting back on parking more
- Moves toward a “site-based” design review which incentivizes high quality project design, transit accessibility, and incorporating DDOT Vision Zero principles
- TIA now just one component of much broader multi-modal evaluation and only triggered in certain situations. Scope the study to the unique needs of the project rather than studying LOS at 20 intersections for the sake of it
- Created Low Impact Development waiver for projects w/low parking ratio, near transit, and under has fewer than 100 parking spaces (~300,000 GSF of development)

What is Unique About DC?

Other cities should take into account the following if considering adopting CTR Guidelines methods:

• **Proffer System**
  – Mitigation is negotiable, no impact fees, no APFO; DDOT has flexibility to define what an “impact” is and how to remedy it
  – DDOT not required to take roadway mitigation directly from LOS analysis; agency policy not to take roadway capacity increasing improvements but instead require cash in-lieu, non-auto improvements, or additional TDM

• **Much of DC is Not Auto-Dependent**
  – DC has excellent transit and is almost entirely urban context – mostly infill development
  – 88% of new DC households are car-free (Census, Chung GGW Article 9/12/14)
  – 78% of new development within ½ mile/walking distance of Metrorail (2014/15 DC Development Report)

• **DC is a City + County + State**
  – DDOT is a DOT for all of those levels of gov't so don't have to deal with multiple other DOTs with differing missions
  – DDOT issues curb cut permits and controls the public space permitting process

• **DC is a fast growing city**
  – A lot of new development and population growth gives opportunities to transform the landscape of the city

• **CTR Guidelines do not need to be approved by a planning commission or city council**
  – Since the CTR Guidelines are DDOT-PSD policy, there is more ability to experiment and quickly adjust policies

• **DC has no city-wide TDM ordinance**
  – Must negotiate a TDM Plan on each project when PSD review triggered (PSD does not review all developments)

• **DDOT and DC Office of Planning work in close collaboration on land use + transportation**
  – Both support higher density, mixed-use, and reduced on-site parking, especially near transit

• **DC has maximum height limit of about 13 stories which acts as a natural cap on site density**

• **DC has an independent Public Space Committee (PSC) to adjudicate public realm design disputes**

• **DDOT has agency culture that embraces innovation, experimentation, and disruption**
DDOT Approach to Mitigation

Impact Policy
- Must mitigate high parking ratio and intersection capacity impacts (LOS, V/C, queueing).
- Must propose roadway mitigation to demonstrate they could work, but DDOT reserves right to instead request something else of comparable value or considering mode shift impact.
- Signal timing/cycle length adjustments are not implemented in conjunction w/a specific project since signals are in coordinated networks + not clear future traffic will materialize as projected.
  - DDOT updates signal timings on 5 +/- year rotating basis which picks up traffic from new developments and changes in travel patterns.

Hierarchy of Mitigation (in order of DDOT preference):
(1) Establish optimal site design
(2) Reduce vehicle parking
(3) Implement more TDM
(4) Upgrade ped/bike/transit facilities
(5) Monetary contribution toward non-auto facilities
(6) Roadway capacity changes (only if deemed necessary by DDOT)
Performance Monitoring Plans (PMP)

When is a PMP Required?
- Campus Plans (Georgetown, Catholic, American, etc)
- Larger developments (Wharf, McMillan, etc)
- Projects with high SOVs (schools, daycares, etc)

PMPs Include the Following:
- Initial trigger (i.e., % occupancy) and set of initial TDM strategies
- Trip cap or modeshare goal
- Reporting requirements (i.e., frequency, data needs, surveys)
- Sun setting conditions (i.e., number of years)
- Course of action if goals not met

PMP Enforcement if Goals Not Met:
- Meet w/DDOT to determine more effective TDM strategies
- PMP extended for additional years, until goals met
- DDOT could report zoning violation to Office of Zoning and/or Zoning Administrator
- DDOT to recommend denial in future zoning cases or withhold public space permit
Topics for Future Research / Exploration

- Relationships between parking, auto-ownership, and trip generation
- Is there a need to split vehicle trip gen into trips by personal vehicles vs ride-hailing vehicles?
- Implications to mode shift, transit ridership, auto ownership, and curbside usage from reduced parking
- Implications to mobility for different lifestyles, stages of life, and geographic and socioeconomic equity
- Explore ways to use VMT or VMT/capita at site level or a different metric (e.g., Walk Score)
- Metrics for non-auto modes (beyond connectivity and ADA accessibility)
- Quantify impacts of individual and cumulative TDM strategies
- Respond to rapidly evolving urban freight and curbside challenges
- Measure impacts of micro-mobility and other last-mile travel options
- Differing needs and travel patterns between projects targeting affluent, market rate, and affordable markets
- Explore implementation of development and/or transit impact fees
- Prepare for AVs and ensure they do not encourage SOVs and undermine public transit

(more topics listed in *Guidance for Comprehensive Transportation Review, Version 2.0*)
